(54) PHOTOGRAPHIC SYSTEM

(57)Abstract:

PURPOSE: To obtain final output prints in a new form by properly laying out several pictures on one face of an album or the like based on recorded information at the time of printing.

CONSTITUTION: Pictures of several frames are properly laid out on one face of a sheet of photographic paper 22 by a printer 13. For the purpose of laying out them in this manner, this system is so constituted that information for photographing is recorded on a recording medium like a photosensitive film 21 by a camera and the printer 13 is operated based on this information. For example, the camera records top positions of photographed frames, namely, vertical relations of them at the time of photographing, and longitudinal and transverse positions of pictures of frames are accurately reproduced based on this information at the time of laying out them on the photographic paper 22 by the printer 13. Thus, a user can receive prints as a kind of album.

LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]
